Re: Grainger Punch-out is Not Working

We have notified Grainger their punch-out is not working properly. The site will launch and allow users to create orders without issue. However, when users attempt to check out and return to ProcureAz an error is generated that prevents the creation of a requisition.

The cause of the error has been determined and we are currently waiting for Grainger to deploy the fix. We do not have an ETA for the fix at this time.

If you need to place an order with Grainger TODAY we recommend using a Direct Release Requisition until notified the punch-out website has been corrected.

Thank you.
